Who are we?

We are one of the largest audit and advisory firms in the world. We have been operating in Poland since 1990 and providing services in the field of audit, consulting, tax and legal, deal advisory, accounting and IT/tech advisory services. We have over 2,300 employees in Warsaw, Kraków, Poznań, Wrocław, Gdańsk, Katowice and Łódź - together we make up #generationKPMG.

Modern technology forms part of the work of all KPMG departments. In our daily work, we combine the digital world with the world of consulting. We have 13 teams, where we employ, among others: **analysts, programmers, developers, and testers.**

We are looking for:

- 3rd, 4th, 5th year students or graduates in Computer Science, Telecommunications, Econometrics, Quantitative Methods and Technical, Scientific, and Related disciplines
- experience in diverse technologies required for senior positions
- very good knowledge of English
- knowledge of data processing and analysis languages, e.g. **C#, .NET, Java, JavaScript, Python, Angular, SQL, Azur, MS Dynamics**
- ability to analyse and synthesise data
- interest in new technologies

Cyber security

We comprehensively help our clients protect their businesses from cyber attacks

The Cyber Security team is a regional competence centre that provides cyber security services to Polish and foreign companies. We identify security vulnerabilities and increase the level of security in response to a cyber-attack. New technologies and international projects in the field of ICT security await you here.

- 3rd to 5th year students
- graduates or candidates with experience
- majors: computer science, technical, science

Your qualities and skills:

- knowledge of issues related to the security of IT systems and solutions
- communication and teamwork skills
- ability to analyse issues and propose solutions in a distributed environment (SCRUM/AGILE)
- knowledge of regulatory compliance issues
- good knowledge of English

Technologies used:

various technologies depending on project requirements

Opportunities for students:

upskilling training support and financial support
in obtaining certifications

IT

We solve problems. Mainly those related to IT

Our IT team supports employees in resolving day-to-day IT support issues concerning the smooth operation of computer hardware, software, and networks. Our main responsibilities include but are not limited to liaising with company staff to diagnose and resolve problems associated with the operation of computer hardware, software, and telephones; informing and supporting users in the event of system failures; and reporting and classifying requests.

Our expectations:

- 3rd - 5th year students
- graduates or candidates with experience
- majors: computer science, technical, science and related studies

Your qualities and skills:

- excellent knowledge of MS Windows systems and advanced functions of MS Office software
- ability to diagnose and solve problems with computer hardware and software
- good knowledge of English
- ability to work in a team
- ability to work under time pressure

Opportunities for students:

upskilling training support and financial support
in obtaining certifications

Tax Technology

We optimise tax processes

The Tax Technology team provides technological support to KPMG experts as well as directly to clients in the implementation of tax requirements. We are involved in the development of web-based applications that streamline and speed up tax settlements (the so-called compliance), but also enable timely and correct reporting of the relevant requirements to supervisory authorities. Projects such as those related to new technologies and data analysis await you here.

- majors: computer science, technical, science and related studies

Your qualities and skills:

- analytical skills
- love of logic and algorithm creation
- insight
- meticulousness

Technologies used:

C#, .NET, JavaScript, TypeScript, CSS, HTML, Angular, MSSQL databases, Azure

Opportunities for students:

training to improve your skills, substantive and financial support in obtaining certifications

#tax #TECHnology

Tax GMS Developers

We code international delegation and tax settlement processes

Tax GMS Developers is a team that develops and implements advanced IT systems to support broadly understood tax settlement processes. We focus on innovation, secure and ergonomic solutions. Projects related to global tax processes, new technologies and business models, among others, await you here.

generationkpmg.pl

#tax #GlobalMobilityServices

Our expectations:

- 3rd to 5th year students
- graduates or candidates with experience
- majors: computer science, technical, science and related studies

Your qualities and skills:

- knowledge of database concepts (SQL, stored procedures, schema design)
- ability to use OOPs concepts and SOLID principles for programming
- ability to analyse existing code and make modifications and improvements

Technologies used:

C#, ASP.NET MVC, Web API, SQL Server, HTML, CSS & JavaScript

Opportunities for students:

upskilling training, substantive and financial support in obtaining certifications

#tax #GlobalMobilityServices

Data Science & AI

**Building competitive advantage
with artificial intelligence**

The Data Science & AI team implements AI solutions for global companies in the financial, retail, consumer goods and insurance industries. As part of our digital transformation, we work with some of the world's largest organisations. Projects that await you include data monetisation with Ethical AI and emerging technologies.

generationkpmg.pl

#AI #NewTechnology

Our expectations:

- 3rd - 5th year students
- graduates
- candidates with experience
- majors: mathematics, quantitative analysis, data science, computer science, econometrics

Your qualities and skills:

- analytical thinking
- good organisation of work
- ability to work in a team
- meticulous
- willingness to work on complex model implementations and analyses using ML

Technology used:

Python

Additional skills will be an advantage:

knowledge of analytical DS/ML libraries: Scikit-learn, XGBoost / LightGBM, Seaborn, Statsmodels, Keras

Opportunities for students:

up-skilling training, substantive and financial support in obtaining certifications

IT Audit & Assurance

We audit IT organisations and processes

The IT Audit & Assurance team deals with IT process analysis, IT risk management and big data. We provide independent opinions on the compliance of systems for companies rendering services to others that are relevant to their financial statements. We also offer assurance services for companies providing services where confidentiality or availability of data is critical, e.g. cloud IT services, HR data processing or medical data processing.

Our expectations:

- 3rd - 5th year students
- graduates or candidates with experience
- IT related majors
- internal audit, finance, use of IT tools in business
- quantitative methods

Your qualities and skills:

- interest in topics related to modern technology and economics
- ability to search and analyse information efficiently
- ability to work with data and draw logical conclusions

Opportunities for students:

training to improve your skills, substantive
and financial support in obtaining certifications

#ITrisk #BigData

Solutions Development

**We find comprehensive IT solutions
for financial institutions**

Solutions Development is a team that carries out IT consulting projects mainly for financial institutions at home and abroad. Among other things, we provide services in the following areas: analysis of business requirements, design, construction, implementation and post-implementation support of modern IT systems, substantive support for IT projects.

Our expectations:

- 3rd to 5th year students
- graduates or candidates with experience
- majors related to computer science, econometrics, mathematics, physics, or other science subjects

Your qualities and skills:

- analytical skills
- good organisation
- high communication skills
- willingness to get involved in the development of web applications using ASP.NET, .NET Core, .NET Framework, MVC, JavaScript
- creativity and willingness to improve your own competencies

Technologies used:

ASP.NET, .NET Core, .NET Framework, MVC, JavaScript, MS SQL Server, SQL

Opportunities for students:

training to improve your skills, substantive and financial support in obtaining certifications

IT Software Engineering

We provide maintenance and development of internal systems

IT Software Engineering is a team that builds solutions to support KPMG employees in Poland and the CEE region. Among other things, we deal with digital transformation inside KPMG, creating systems using principles, patterns and practices of agile software development. We are also responsible for building new applications and moving existing applications to the Microsoft Azure cloud.

generationkpmg.pl

#DigitalTransformation #cloud
